

# Automated Intelligence By **Qarik** AI

Using open source code and proprietary know-how, tooling, and frameworks, Qarik has developed a GenAI accelerator, Automated Intelligence. Automated Intelligence enables organizations to quickly explore, prove, and utilize the power of GenAI for their specific business in weeks, and scale these capabilities into production in months. Qarik has built a reusable code base leveraging cutting-edge models and tooling to help companies accelerate the value they get from unstructured data in an accurate, scalable, and safe way.

## Automated Intelligence for Retail

### Warranty & Claims Optimization

Understand product deficiencies and warranty trends to make more informed decisions

### New Product Development

Accelerate research through easy querying, summarization, and insight generation

### Invoice Reconciliation

Automate the manual process of comparing invoices to receipts

### Vendor Onboarding

Accelerate onboarding new vendors and merchandise by automating the contract review and registration process

### Product Catalog Management

Enable & enhance categorization, product cross-sell, up-sell, substitution and more

## What we need from you

A **C-level** sponsor inside your organization

**Client Team** you can dedicate to the project

A defined **use case** that can generate significant value

**Unstructured Data** - documents & the ability to access cloud

**Qarik can prove out use case viability in 4-6 weeks and deploy into production within months**
