Qarik

Automated Intelligence By Qarik AI

Using open source code and proprietary know-how, tooling, and frameworks, Qarik has developed a GenAI accelerator, Automated Intelligence. Automated Intelligence enables organizations to quickly explore, prove, and utilize the power of GenAI for their specific business in weeks, and scale these capabilities into production in months. Qarik has built a reusable code base leveraging cutting-edge models and tooling to help companies accelerate the value they get from unstructured data in an accurate, scalable, and safe way.

Automated Intelligence for Financial Services

Document Search
Empower employees with self service tools to find and understand information in contracts

Personalized Financial Recommendations
Build a creative process of one-to-one personalized messaging at scale

Regulatory Code Changes
Empower developers to understand regulatory changes easily by providing summarized answers and snippets to questions

Market Research
Identify and summarize key information by analyzing event transcripts, company filings, consensus estimates, and more

What we need from you

A **C-level** sponsor inside your organization

Client Team you can dedicate to the project

A defined **use case** that can generate significant value

Unstructured Data - documents & the ability to access cloud

Qarik can prove out use case viability in 4-6 weeks and deploy into production within months
